TITLE	World Indices of Agricultural and Food Production, 1977-86. Statistical Bulletin Number 759.
INSTITUTION	Economic Research Service (DOA), Washington, D.C.
PUB DATE	Mar 88
NOTE	313p.
AVAILABLE FROM	Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.
PUB TYPE	Statistical Data (110)
EDRS PRICE	MF01/PC13 Plus Postage.
DESCRIPTORS	*Agricultural Production; *Cost Indexes; Developed Nations; Developing Nations; *Food; Foreign Countries
IDENTIFIERS	Africa; Asia; Europe; Oceania; Western Hemisphere

ABSTRACT

World food production reached a record high in 1986, exceeding 1985's record by about 1 percent, despite declining food output in Latin America, the United States, Western Europe, and Oceania. World food production generally increased faster than population from 1977 to 1986. Production of agricultural commodities increased at an annual compound rate of about 2.3 percent, but only 0.7 percent on a per capita basis. This report contains 151 indexes of total and per capita agricultural and food production for 1977-86 for 111 countries, 12 regions, and the world. The indexes are calculated using a Laspeyres base-weighted aggregate formula. The data for the reports were obtained primarily from the official statistics of foreign governments. Other sources include commodity reports from the Food and Agriculture Organization and the United States Department of Agriculture's Foreign Agricultural Service and Economic Research Service. BEST COPY AVAILABLE

SALES INFORMATION

Additional copies of this report can be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. Order by title and series number. Write to the above address for price information or call the GPO order desk at (202) 783-3238. You may also charge your purchase by telephone to your VISA, MasterCard, or GPO Deposit Account. Bulk discounts are available. Foreign customers, please add 25 percent extra for postage.

Microfiche copies ($6.95 each) can be purchased from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA 22161. Order by title and series number. Enclose a check or money order payable to NTIS; add $3 handling charge for each order. Call NTIS at (703) 487-4650 and charge your purchase to your VISA, MasterCard, American Express, or NTIS Deposit Account. NTIS will RUSH your order within 24 hours for an extra $10; call (800-336-4700).

The Economic Research Service has no copies for free distribution.

DATABASE INFORMATION

An electronic database containing many of the statistics in this report is available for sale from the Economic Research Service. This database is in the form of EBCDIC files on a 9-track, unlabeled magnetic tape. To order, write ERS/DATA, Room 228, 1301 New York Avenue, N.W., Washington, D.C. 20005-4788. Request World Production Data, specify a preferred recording density (1600 or 6250 b.p.i.), and include a check or money order payable to "ERS/DATA" for $125. For further information about this database, write David Stallings, Room 828, 1301 New York Avenue, N.W., Washington, D.C. 20005-4788 or call (202) 786-1707.

WORLD INDICES OF AGRICULTURAL AND FOOD PRODUCTION, 1977-86. Agriculture and Trade Analysis Division, Economic Research Service, U.S. Department of Agriculture. Statistical Bulletin No. 759.

ABSTRACT

World food production reached a record high in 1986, exceeding 1985's record by about 1 percent, despite declining food output in Latin America, the United States, Western Europe, and Oceania. World food production generally increased faster than population from 1977 to 1986. Production of agricultural commodities increased at an annual compound rate of about 2.3 percent but only 0.7 percent on a per capita basis. This report presents indices of total and per capita agricultural and food production for 1977-86 for 111 countries, 12 regions, and the world. The indices are calculated using a Laspeyres base-weighted aggregate formula.

Keywords: Production indices, per capita indices, agricultural production, food production, Africa, Asia, Oceania, Europe, Western Hemisphere, world.

ACKNOWLEDGMENTS

Charles E. Goode, agricultural economist, Economic Research Service (ERS), coordinated the overall planning and preparation of the report. ERS country analysts contributed the agricultural data. Phil Rose and Tammy Roberts, ERS Data Services Center, provided programming, output, and other computer assistance. Alma Young, Erma McCray, and Denise Morton, ERS, provided research assistance and electronic word processing. Sharon Lee, Economics Management Staff (EMS), provided editorial support and Susan Yanero, EMS, provided graphics assistance.

PREFACE

This seventh issue of World Indices of Agricultural and Food Production updates and revises the data and indices previously published in the World Indices of Agricultural and Food Production (Statistical Bulletin No. 744, July 1986).

The U.S. Department of State's Agency for International Development (AID) provides partial funding for the research and preparation of this publication. The results and information in this report are used for congressional reports and data files on countries receiving AID funds for agricultural development assistance.

World Indices of Agricultural and Food Production, 1977-86

INTRODUCTION

Annual data on agricultural and food production and production indices in foreign countries are a part of continuing assessment of the world agricultural situation and outlook. The production indices measure changes in annual total and per capita production and provide a means to aggregate, compare, and measure changes in world, regional, and country output of food and agriculture.

Primary commodities produced annually in each country are reported in 1,000 metric tons. The annual total production increases are divided by annual total population increases to calculate per capita production indices.

DATA DESCRIPTION

The populations in the developing countries continue to increase at the highest rates among international regions and countries, while the populations in the centrally planned countries are increasing at a higher rate than in developed countries. From 1977 to 1986, food production in the developing countries increased 3.3 percent annually, while developed and centrally planned countries increased food production 1.9 and 2.3 percent, respectively.

This report presents indices of world agricultural and food production per capita for 12 regions and 111 countries. A Laspeyres base-weighted aggregate formula was used to calculate country indices. The indices are constructed from annual production data (in 1,000 metric tons) and multiplied by a price weight using a 1976-78 = 100 base period. The resulting annual sums are divided by the values in the base period to calculate an index which represents the change in production.

The aggregate values are shown in million dollars at constant prices and are the annual sums of the quantities multiplied by the price weights from the base period. The sum of the commodities listed for each country represents the current value of agricultural production for the base period. The sums of aggregates for other years are the values based on prices held constant at the 1976-78 average level. Any change in the aggregate values can be attributed to a change in production because prices are held constant.

The period 1976-78 was selected as a 3-year average for the base year. During this period, both agricultural prices and production were relatively stable throughout the world. Price weights for the base period are average annual prices received by producers for each commodity within their respective countries in local currencies.

Exchange rates, published by the International Monetary Fund (IMF), were used to convert local currencies to U.S. dollars as a uniform standard weight. However, rates for the Eastern European countries, the U.S.S.R., and the People's Republic of China were derived from noncommercial, tourist, and other nonfixed (base) rates. These rates more nearly reflect actual free (not official) currency exchange rates, comparable with other free rates of exchange. Producer prices for the base period were obtained primarily from the Food and Agriculture Organization of the United Nations (FAO). Some price data were obtained from official reports of the countries concerned.

The formula for computing the indices for the geographic regions and economic groups is a weighted aggregative type, which is the sum of country aggregates in the group or region. World and regional indices were limited to include only those countries listed in this publication. This formula involves a skewed distribution favoring countries with relatively comprehensive commodity coverage or relatively high price weights, giving them more weight when aggregating countries into regions. The skewed distribution is normally not significant enough to offset the advantages derived by combining countries into various alternative regions and subregions.

Corn, oilseeds, and other products used for livestock feed could be included in both the crop production indices and the livestock production indices. A livestock deduction factor was derived in countries where commercial livestock feeding is important to eliminate this double counting of feed products. Grazing, pasture, hay, and other similar farm feedings are not accounted for in these indices and, therefore, are not used in calculating the feed deduction.

A fixed percentage deduction for feed was derived by dividing the value of feed for the 1976-78 base period by the gross value of livestock output in the same years. The feed value for the base period was calculated by multiplying the prices received by farmers by the amount of grains, oilseeds, and other crops fed.

Average prices paid by farmers were used for byproduct feeds such as bran or oilcake. The feed deduction is a constant percentage of the annual value of livestock production. Feed deduction, however, does not express year-to-year variations in feed actually fed.

SOURCES AND RELIABILITY OF DATA

Official statistics of foreign governments are the primary sources of the production statistics used in this report. Other sources include commodity reports from FAO and the U.S. Department of Agriculture's Foreign Agricultural Service and Economic Research Service. The data for most developing countries in earlier issues of this annual report are not as reliable as those in recent years. For comparability and reasonableness, some agricultural production statistics were adjusted to complete a full series of years.

COMMODITY COVERAGE

Not all agricultural and food production within a country could be accounted for in this report. However, the major portion of total production and of leading products are included to measure the change in annual agricultural and food production. These major selected products seem to fairly represent each country's historical trends and changes in agriculture. Plantation or commercially grown crops are generally better reported than noncommercial crops. Crop coverage is usually better than that for livestock, fruits, and vegetables. Farm products grown and consumed in home yards are not always included in a country's statistics and are, therefore, not included in this report.

Hay, pasture, silage, and grazing data are not included because of a lack of comparable worldwide measuring and reporting standards. Also, meat production indices do not account for changes in annual inventory numbers or in average weights. Meat data are on a carcass-weight basis, excluding offal and trimmed fat. They include both official and unofficial domestic slaughter where reported. In the few countries with significant imports or exports of live animals, allowances are made for annual trade by adding the aggregate value and the value of live animals imported and subtracting the value of live animals exported for slaughter.

FOOD AND PER CAPITA INDICES

Index numbers of food production are computed for the world, 12 regions, and all 111 countries. The index numbers are derived from the same production and price data as the agricultural index and differ only by the exclusion of fiber products, such as rubber, cotton, hemp, kenaf, wool, jute, sisal, tobacco, and beverage products, such as coffee, tea, and wine. The food products listed for each country do not account for the entire country's food production. Therefore, some food output may be exported and not available for domestic use, while other food may be imported and not accounted for in these indices.

TIME REFERENCE

Commodities are combined and shown for the calendar year in which the bulk of the harvest occurred. Where countries report production of coffee, cocoa, and cotton, and other commodities on an international marketing year, reported production begins at the start of the marketing or split year shown, such as 1986/87.

COMPARING DATA

Some of the production statistics may differ from series published by other organizations or countries. Most countries continually review and revise their statistics and reporting systems. Discrepancies also occur in converting locally used units to metric measures or combining the harvest of two separate crops within a 12-month period. Production data can often be confusing when reported on a marketing, crop, or other split-year basis in determining which calendar year the bulk of the harvest occurred.

Countries that customarily publish indices of the gross value of agricultural production select their own price weights, base years, and methodology. These factors, plus differences in defining and measuring meat production, changes in livestock inventory and weights, and variations in commodity coverage, are major reasons for deviations in the respective country indices and those in this report. However, the percentage change from one year to another appears to be minimal.

AGRICULTURAL AND FOOD PRODUCTION LINEAR TRENDS

In fitting a straight trend line to world agricultural production from 1950 to 1985, the average output is:

$$Y = -47.7131 + 1.919867X = \text{yearly increase.} \quad (1)$$

Regression Output

$$Y = a + bx$$

Constant	-47.713100
Standard error of Y estimates	1.567000
R squared	.994502
Number of observations	37
Degrees of freedom	35
x coefficient (S)	1.919867
Standard error of coefficient	.024127

In fitting a straight trend line to world food production from 1950 to 1985, the average output is:

$$Y = -48.8923 + 1.931247X = \text{yearly increase.} \quad (2)$$

Regression Output

$$Y = a + bx$$

Constant	-48.892300
Standard error of Y estimates	1.716663
R squared	.993486
Number of observations	37
Degrees of freedom	35
x coefficient (S)	1.931247
Standard error of coefficient	.026432

The trend value for world agricultural and food production for any particular year was determined from equations (1) and (2) and by substituting the year ordinal number for x (figs. 1 and 2). The average percentage increase for the least-squares straight-line trend is calculated by dividing b by a and multiplying by 100.
